

Work Description--Dramatic Sound Design

We rehearsed and performed the play smoothly. One of the hardest parts for me was working with different teams, such as actors and lighting technicians. I had to communicate clearly and make sure everything was in the right order. This experience helped me realize that teamwork is very important for a successful performance. I also learned more about how sound design can create emotions and ideas in a play. It is not just technical work—it is also about helping the audience feel connected to the characters and the story.

This experience made me more determined to use sound design to talk about important social issues. For example, I would like to explore topics such as stopping domestic violence and fighting against gender discrimination. These are serious problems, and I believe sound can make people think about them in new ways. Using sound effects and music, I want to share these messages in a way that creates strong emotions and helps the audience reflect on these topics. Sound design is not only an art form; it can also be a tool to create social change.

This project taught me how sound design can make a big impact in storytelling. It has inspired me to keep learning and exploring how sound can be used to bring real changes to society in the future.
